

WEBSITE UX / UI REVIEW

A cleaner, more *corporate* Supremo.

An interface audit of [supremo-nine.vercel.app](#) against the brief: a **minimal, corporate** identity. This document pairs the current screens with proposed direction — what to keep, what to fix, and the order to do it in.

◆ 13 screens reviewed · 9 recommendations

Strong substance, noisy surface.

Supremo's site is content-rich and clearly built for a B2B dealer audience — the depth (manufacturing process, QC, locations, dealer economics) is a real asset. The problem is presentation: a cluttered hero, duplicated navigation, mixed icon styles, and low-contrast text pull the experience away from the “minimal, corporate” feel the brand is aiming for. None of this requires a rebuild — it's tightening, not reinventing.

✓ What's already working

- Clear information architecture and a sensible page set (Products, About, Manufacturing, Dealership...).
- Genuinely useful content: timeline, QC process, plant locations, dealer margins.
- A consistent serif brand voice and a confident primary blue.
- Good recurring patterns — stat bands, numbered steps, breadcrumbs.

⚠ What's undercutting it

- Hero is overloaded: a headline, a busy photo and a second promo graphic compete — text is unreadable.
- Two stacked navigation bars on hero pages.
- Inconsistent iconography (clean line icons vs. coloured emoji).
- Full-colour, uneven logo wall and low-contrast body text fight the minimal goal.

Hero & first impression		Needs work

Accessibility / contrast		Needs work
Information architecture		Strong
Content depth		Strong

How to read this report: each section shows the screen as it is today (CURRENT) beside the proposed direction (PROPOSED), followed by a prioritised action list and a phased roadmap.

One message, one focal point.

The hero is the single biggest gap between the site and the “minimal corporate” brief. Today three things fight for attention and the headline is illegible. The fix is ruthless reduction: one headline, one supporting image, one set of actions — on a calm background with real contrast.

CURRENT

- **Three competing layers.** A serif headline, a photographic background and a separate yellow product advert overlap in the same space.
- **Unreadable headline.** “India’s Water.” sits blue-on-yellow with near-zero contrast; the sub-text disappears into the photo.
- **Duplicated navigation.** A transparent nav over the photo and a solid white nav directly beneath it — the same menu twice.
- **No clear entry action.** Two buttons sit low and dim against a busy plate.

PROPOSED

- **Remove the promo graphic entirely.** Lead with one calm product image on a soft panel — no photo-on-photo collage.
- **High-contrast headline.** Dark serif on white reads instantly and feels corporate; sub-copy in a single muted grey.
- **One navigation bar,** sticky, with a single primary “Become a Dealer” action.
- **Trust chips** (ISI / ISO / 22 states) do the credibility work the busy advert was trying to do — quietly.

Remove the doubles, fill the gaps.

Two quick structural fixes. The duplicated nav should collapse to one sticky bar. The “Featured Product Categories” block currently shows only two oversized cards with large empty areas — it should present all core categories as equal, compact tiles.

Featured categories

● CURRENT

- **Only two categories shown** behind a carousel; the brand sells far more (tanks, pipes, planters, accessories, commercial).
- **Cavernous empty space** inside each card — product floats with no consistent framing.

● PROPOSED

- **Four equal tiles** (scale to a 2×3 grid) — every core line visible at a glance, no carousel hunting.
- **Consistent frame:** fixed image area + label + arrow, tight padding, even rhythm.

Navigation

- **Two navbars stacked** on the homepage and dealership hero — a transparent one over the banner and a solid one below.
- **One sticky bar** on a solid/translucent white background with a hairline divider; logo left, links centre, single primary CTA right.
- Doubles the height before content and reads as a build glitch.
- Standardise the CTA to **one** button style site-wide (see Design System).
- “Become a Dealer” appears in several different button styles across pages.
- Add a clear active state for the current section.

One icon language, one logo rail.

Minimal corporate brands win on consistency. Two places break it today: a dealer-benefits section that uses coloured emoji while the rest of the site uses tidy line icons, and a “Trusted by” logo wall of full-colour, unevenly sized marks.

Iconography — “Built for dealer profitability”

● CURRENT

- **Emoji icons** (truck, chart, card, keypad) render differently on every OS and clash with the line-icon set used in “Why Supremo”.
- Colour and weight vary wildly — the opposite of minimal.

● PROPOSED

- **One line-icon set** (single 1.5–2px stroke, same blue, same tile) across the whole site.
- Pick a single library (e.g. Lucide / Phosphor) and never mix in emoji.

“Trusted by” logo wall

● CURRENT

- **Full-colour, uneven logos** in mismatched boxes — visually loud and inconsistent.
- Copy claims “5000+ ... world wide” while the brand is positioned around 22 Indian states.

● PROPOSED

- **Uniform monochrome logos**, equal optical height, even spacing, hairline rails — colour returns only on hover.
- Make the claim match reality (e.g. “Trusted across 22 states”).

A small kit that keeps it minimal.

Most inconsistencies above disappear once a few tokens are agreed and reused. This is a starting palette and scale tuned to the existing brand — restrained colour, a serif/sans pairing, one button system and an 8-point spacing rhythm.

COLOUR — ONE PRIMARY, DISCIPLINED NEUTRALS

Keep the bright yellow tank photography for *product* shots only — never as a UI/background colour. One accent blue does the heavy lifting.

TYPE — SERIF HEADINGS, SANS UI

H1 / 44 **Built to hold**

H2 / 28 **Section heading**

H3 / 18 **Card title**

Body / 15 Readable sans body copy for UI.

Label **EYEBROW LABEL**

Pairing shown: IBM Plex Serif + Work Sans. Keep the brand's serif character, but switch body & UI to one clean sans for legibility.

BUTTONS — ONE SYSTEM

Become a Dealer ↗

Download Catalogue

Read more

+ hover / focus / disabled states defined once

SPACING — 8-POINT RHYTHM

Consistent section padding (e.g. 96px desktop / 56px mobile) fixes the uneven vertical gaps seen across pages.

COMPONENTS TO STANDARDISE

Define these once and reuse everywhere: **nav bar**, **feature/benefit card** (icon tile + title + copy), **product card** (image + spec chips + one CTA), **stat band**, **numbered step**, **logo rail**, **form field** (label + input + validation), and the **floating contact widget**. Every screen in this site is buildable from that short list.

The full punch-list.

Beyond the flagship fixes, these are the remaining items found across all 13 screens — including functional bugs and content inconsistencies that quietly cost trust. Priority: **P1 now** **P2 soon**

P3 polish

AREA	CURRENT ISSUE	RECOMMENDATION	PRI
Contrast / a11y	Hero headline, eyebrow and body text sit at very low contrast over photography.	Dark text on light surfaces; meet WCAG AA (4.5:1). Use the muted-grey token, never grey-on-photo.	P1
Catalogue download	“Download Catalogue / Brochure” resolves to a blocked javascript: URL — nothing happens.	Link to a real hosted PDF; same fix in hero, product pages and footer.	P1
Phone numbers	Three different numbers appear (+91 95 678 12 345, 080 4801 9654, +91 909 898 9090).	Pick one canonical number + format; reuse the token everywhere.	P1
Floating buttons	Call / WhatsApp bubbles overlap cards, logos and form fields on several sections.	One combined contact widget with safe-area offset; suppress over forms/footer.	P2
Footer links	Social icons and Privacy / Terms / Returns point to #.	Wire to real pages or remove; broken links read as unfinished.	P2
Forms	Consultation & dealership forms lack clear labels, required markers, validation and a success state.	Persistent labels, inline validation, a confirmation state, single phone format.	P2
Product cards	Spec chips and imagery treated slightly differently across best-sellers vs. catalogue.	One product-card component; image + aligned spec chips + one primary CTA, optional “Enquire”.	P2
Copy consistency	Planter colour count varies (8 vs 6 vs 4); “world wide” vs 22-state positioning.	Single source of truth for specs & claims; align copy, swatches and filters.	P2
Section rhythm	Vertical padding and alignment vary between sections.	Apply the 8-pt spacing scale and a consistent 12-column grid.	P3
Hero imagery	Busy, low-art-direction photograph behind text.	Art-directed single image or solid brand panel; product as the hero, not a scene.	P3
Page titles / SEO	Filtered views keep the generic “Products” title.	Dynamic titles per category (“Planters — Supremo India”) for search & sharing.	P3
Motion	Scroll-reveal on the timeline can leave items stranded mid-fade.	Trigger reveals earlier / once; ensure final state is always full-contrast.	P3

Three phases, low risk.

None of this is a rebuild. Phase 1 removes the most visible damage in days; Phase 2 installs the system that prevents drift; Phase 3 is polish. Each phase ships independently.

PHASE 1

Stop the bleeding

~ 3–5 days

- Collapse the duplicated navigation to one bar
- Rebuild the hero: one headline, one image, real contrast
- Fix the broken catalogue download
- Standardise phone number & footer links
- Add safe-area to floating contact buttons

PHASE 2

Install the system

~ 1–2 weeks

- Adopt colour / type / spacing tokens
- Unify icons (one set, no emoji)
- Monochrome logo rail
- Featured + product card components
- Form labels, validation & success states

PHASE 3

Polish & prove

ongoing

- Art-directed hero / product imagery
- Considered motion & hover states
- Full WCAG AA accessibility pass
- Dynamic page titles / SEO
- Consistent 12-col grid everywhere

WHY IT'S WORTH IT

1

clear message in the hero instead of three competing ones

AA

contrast target so every visitor can read the copy

8→1

scattered patterns consolidated into one component kit

0

dead links, duplicate navs or broken downloads

IN ONE LINE

The content is already corporate-grade. Make the *interface* match it — reduce the hero, unify the system, raise the contrast — and Supremo reads as the established, ISO-certified manufacturer it actually is.
